**Week: 11–17 November 2024**

- Researched Chromium APIs and compatibility for browser extension development.
- Created the initial UI wireframes for the extension.

**Week: 16–22 December 2024**

- Connected the browser extension frontend to the Flask backend via API.
- Implemented core Flask backend functions for article analysis.
- Updated the UI layout and began testing browser storage and interaction.

**Week: 23–29 December 2024**

- Implemented the display of analysis results on the result page.
- Added and visualized the reliability score metric using color codes.
- Improved the "similar articles" section and polished result formatting.

**Week: 13–19 January 2025**

- Prepared for secure frontend login implementation by researching token-based flows.

**Week: 27 January – 2 February 2025**

- Fixed menu interaction issues in the extension interface.
- Implemented functionality for remembering the last visited page.

**Week: 3–9 February 2025**

- Designed and built the basic dashboard layout.
- Updated the extension's visual theme and centralized image assets.

**Week: 10–16 February 2025**

- Implemented login, registration, and logout functionality.
- Added authentication token checks and user session handling.
- Developed the history page to show past analysis results.

**Week: 17–23 February 2025**

- Cleaned up repository by updating .gitignore for better version control.

**Week: 24 February – 2 March 2025**

- Fixed UI bugs and redesigned the profile page.
- Made visual and structural updates to the dashboard layout.

**Week: 3–9 March 2025**

- Created the pricing page and implemented its interface.
- Redesigned the report page and enabled dark mode throughout the extension.
- Built a basic theme system for UI consistency.

**Week: 10–16 March 2025**

- Themed the result and report pages according to dark/light mode.
- Improved password update UI and added mobile responsiveness.
- Enhanced the “more details” section for clarity and structure.

**Week: 17–23 March 2025**

- Implemented compatibility fixes for Firefox.
- Improved navigation behavior and button functionality.
- Added new scoring metrics (similarity and objectivity) to the “more details” section.
- Finalized UI styling and finished dark mode implementation.

**Week: 24–30 March 2025**

- Updated the UI of similar article results.
- Fixed bugs related to similar article links and appearance.

**Week: 31 March – 6 April 2025**

- Improved navigation experience.
- Fixed popup rendering issues on Firefox.
- Updated the sign-in script for better reliability.

**Week: 7–13 April 2025**

- Integrated Facebook login support into the extension.

**Week: 14–20 April 2025**

- Updated UI components, including the result details section.
- Made layout improvements and finalized interface polishing.

**Week: 21–27 April 2025**

- Redesigned the popup and result pages for improved usability.
- Switched to using Google-provided article titles for consistency.
- Added time-based filtering to the dashboard and improved the pricing page design.
- Made updates to the email verification page.

**Week: 28 April – 4 May 2025**

- Ensured frontend compatibility with the deployed backend on Google Cloud.
- Applied fixes to backend and frontend integration for cloud support.
